Vida Ramezanian

AI / LLM Engineer | RAG, Semantic Search, Content Moderation

(+98)09912088610 | vida.rmz@gmail.com | https://vidarmz.github.io | vidarmz | Tehran, Iran

Work Experience

Winsoo *Tehran, Iran*

AI Engineer May 2026 – Present

- Built a Persian text and image **content-moderation system** that flags prohibited ads using rules, embeddings, and LLM/vision-model checks, with uncertain cases sent to human reviewers.
- Set up a shared **model hub** (LiteLLM, Ollama, Triton) so several products use the same embedding, LLM, and vision models.
- Built **semantic search** for Persian/English ads and a **LangGraph chatbot** that helps users create billboard ads.
- Developed deep learning models for Persian offensive-language and NSFW image detection.

Bitazza *Bangkok, Thailand*

AI Engineer Aug 2025 – Mar 2026

- Architected and deployed a production RAG and **GraphRAG** conversational assistant on LLaMA and LangGraph, integrating tool calling, retrieval, a knowledge graph, and backend services.
- Built embedding-based product tagging, semantic classification, and vector-search pipelines over large product catalogs.
- Delivered an automated content-ingestion pipeline (RSS, web scraping, LLM-based enrichment) feeding the retrieval stack.

Farazpardazan *Tehran, Iran*

AI Engineer Jan 2023 – Aug 2025

- Led development of **Talz.io**, an AI talent-matching platform built on embeddings, semantic search, and intelligent retrieval.
- Designed LLM-powered conversational assistants for the **ENMB** banking app, integrating with backend APIs and financial services.
- Built hierarchical multi-label classification and tagging systems using LLMs and transformer embeddings.
- Set up MLOps pipelines for training, deployment, monitoring, and continuous improvement; evaluated speech-driven NeRF avatars and improved lip-sync accuracy through data-driven experiments.

Research Experience

Researcher *Tehran, Iran*

Image Processing Lab, Sharif University of Technology (Prof. S. Kasaei) 2022 – 2025

- MSc thesis: made monocular depth estimation models more reliable by estimating their uncertainty.
- Improved weakly supervised video instance segmentation through better clustering and feature extraction.
- Co-authored a survey on knowledge distillation (TMLR 2025).

Researcher *Tehran, Iran*

Persian NLP Research (Dr. E. Asgari) 2022 – 2023

- Benchmarked Persian question-answering systems and built a dataset and models for converting colloquial Persian to formal text.

Technical Skills

LLM & Agents	RAG, GraphRAG, LangChain, LangGraph, multi-agent workflows, tool/function calling, MCP, n8n
Search & Retrieval	Hybrid search (BM25/trigram + dense), reranking, pgvector, FAISS, ChromaDB, Neo4j, PostGIS
ML & NLP	PyTorch, Hugging Face Transformers, fine-tuning, scikit-learn, MLflow, OpenCV, CLIP/SigLIP, OCR, Persian NLP
Backend	Python (advanced), FastAPI, Django, Celery, SQLAlchemy, Alembic, REST APIs, PostgreSQL; C++ (intermediate)
Serving & MLOps	Docker, Docker Compose, GitLab CI/CD, Triton Inference Server, ONNX, Ollama, vLLM, LiteLLM, uv
Languages	Persian (native), English (full professional; TOEFL 109)

Education

Sharif University of Technology *Tehran, Iran*

MS, Computer Engineering (Artificial Intelligence & Robotics) Sep 2021 – Jun 2024

- GPA: 18.5/20 (4.0/4.0). Thesis: Uncertainty-aware Monocular Depth Estimation with Deep Neural Networks.
- Teaching Assistant for graduate Machine Learning, Deep Learning, NLP, and 3D Vision courses.

Amirkabir University of Technology *Tehran, Iran*

BS, Electrical Engineering (Electronics) Sep 2015 – Jan 2020

- GPA: 16.6/20 (3.4/4.0). Thesis: Hand Motion Classification from EMG Signals.

Selected Publications

- **EACL 2026**: HarfoSokhan, a parallel dataset for Persian colloquial-to-formal text conversion. [OpenReview]
- **TMLR 2025**: A Comprehensive Survey on Knowledge Distillation. [Preprint]
- **MVIP 2024**: A Novel Loss Function Based on Clustering Quality Criteria in Spatio-Temporal Clustering. [Paper]
